

Sirocco

quite simply, the finest burner ever made

Designed by Paolo Bonanno

Once or twice a lifetime comes a product so revolutionary it changes everything. Announcing Sirocco™ — a revolutionary burner design, a pure joy to fly.

Sirocco's unique design has two ring-jets that outperform hundreds of conventional jets, generating a pencil-thin blue flame that's easily controllable on even the toughest of inflations. Your passengers and crew will enjoy the lower radiant heat, and much quieter operation.

Best of all, Sirocco's ingenious design monitors its own performance. When dropping fuel pressure strikes, the patented regulation system opens additional jets to boost power. So there's no more being caught out by cool morning temperatures.

Now fully certified in the USA, and with hundreds in service worldwide, the Sirocco™ offers rock solid performance.

And did we mention that maintaining a Sirocco™ is child's play? With its modular design, and easy-access construction, maintenance is a breeze. Yet Sirocco™ still has all the precision construction, duplicated controls, and twin fuel paths that Cameron burners are famous for. And with the addition of the clever FastFire™, you can actuate both burners with one hand, and still enjoy full power.

With less noise, less radiant heat, less condensation, more control and more power, flying becomes a true joy, and your passengers and crew will love you too.

So enjoy the revolution and treat yourself to a Sirocco. We have yours waiting for you.
