Natural shaped, multi-gored N-Type envelopes provide an almost flat surface that is especially suited to the display of artwork. The 24 gore envelopes are constructed by sewing together 48 half-gores. Each half-gore is constructed from four nylon panels which are referred to - from the base of the balloon - as panels A,B,C and D.

The row of panels at the very bottom, those that form the mouth, are made from heat resistant Nomex.

A parachute top is standard up to N-145; Lock-Top on N-160. A fast deflation system is available on larger sizes. Parachutes are constructed from 24 panels that radiate from a center patch.

There is no extra charge for changes of fabric color at any of the lines shown on the chart if the colors are from the standard Cameron range.
