

For horizontally based patterns such as spirals or vertical stripes the number of colors used must divide evenly into 20, color sequences that do not divide evenly into 20 will result in an asymmetric color pattern.

Any significant artwork such as corporate logos should be placed at the equator (Panel G) and be centered to a gore. The height of any significant artwork/logos should not exceed Panel J.

Horizontal logos/artwork should be no larger than 5 gores wide and repeat twice on either the left (L) & right (R) sides or the front (F) & back (B) of the balloon.

Vertical logos/artwork should be 3 or 5 gores wide.

3 gore wide logos/artwork can repeat two times or four times.

5 gore wide logos/artwork can repeat two times on either the left (L) & right (R) sides or the front (F) & back (B) of the balloon.

Simple artwork such as stars or special cuts maybe placed anywhere in Panels A-QSV and should repeat evenly around the balloon.

For the best looking results the color(s) of the SA panel should match the A panel.

The parachute is constructed from 20 gores that radiate from a center patch, each gore contains two panels.

There is no extra charge for changes of fabric color at any of the lines shown on the chart if the colors are from the standard Cameron range, which is listed below.

The standard Cameron Nomex™ colors are also listed below and should only be used in the Nomex™ base panel, and Scoop.
